

REAL-TIME TRADE DECISIONING · ALPHA FROM FLOW

The Trade Intelligence Engine

A real-time operating system for brokerages and prop firms. It decides every trade to protect the book — and turns your entire order flow into proprietary, per-symbol alpha.

One system, two P&L engines — deployed on your flow in two quarters.

01

A category, not a feature.

Context-aware trade decisioning, plus alpha harvested from flow. Built and proven — not a slideware concept.

02

Two engines, one data asset.

Defend the book in real time, and harvest proprietary alpha from the same order flow you already own.

03

Live in two quarters.

Shadow-tested on your data first, then inline under full governance. Provable uplift before you commit capital.

DEFEND Higher risk-adjusted P&L	CREATE A new, uncorrelated alpha line	DEPLOY Live in < 2 quarters	GOVERN Explainable, audited decisions
------------------------------------	--	--------------------------------	--

Defend the book. Harvest the alpha. From the same flow.

ENGINE 01 · DEFEND

The Risk Engine

Decides every trade in real time — internalise, hedge, or route — to maximise risk-adjusted P&L. Protects and grows the revenue you already make.

Outcome → toxic flow externalised, benign flow kept

ENGINE 02 · CREATE

The Alpha Engine

Scores every trade, turns the whole client book into a live per-symbol signal, and places proprietary alpha trades. A new revenue line from data you already hold.

Outcome → an uncorrelated, compounding P&L stream

One shared real-time context layer · one self-learning core · build once, monetise twice

SECTION 01

01

The Risk Engine

Stop scoring clients. Decide every trade in real time
— across client, market, book and liquidity.

Stop scoring clients. Start deciding trades.

THE CONVENTIONAL APPROACH · STATIC CLIENT SCORING

Client

→

Score = 72

→

A-book

One label per client — blind to the market, our book and the moment.

THE ENGINE · CONTEXT-AWARE TRADE DECISIONING

Trade request

+

Client

Market

Book

Liquidity

→

Optimise the action

→

Decision

“The client is the risk” breaks under stress.

CONTEXT FLIPS IT

A harmless client turns toxic at NFP.

The account that is benign on a quiet Tuesday becomes adverse selection in a volatility spike around CPI or FOMC.

NOT EVERY TRADE

A toxic client isn't toxic on every order.

Penalising every order from a flagged client leaks the legitimate, profitable flow that same client also brings.

LOSERS BITE TOO

A losing client can still create exposure.

If their position compounds the book's existing concentration, internalising it is the risk — not their P&L.

Risk lives at the interaction — not inside the client.

SAME CLIENT, MINUTES APART

Identical client, opposite correct decisions.

Client ZL-41200 · Vertex Systematic – identical profile in both trades

Capacity & slippage

Market, book and liquidity — the context most desks ignore.

MARKET STATE · LIVE	
NFP	00:01:58
CPI	2d 04h
FOMC	6d
Vol regime	Rising ▲

OUR BOOK · NET EXPOSURE	
EUR/USD	+\$22M
XAU/USD	-\$9M
NAS100	+\$14M
VaR used	71%

LIQUIDITY · PER VENUE			
VENUE	REJ	LAT	STATUS
XTX	0.8%	11ms	PREF
JPM	1.6%	18ms	OK
Flow Traders	4.9%	34ms	DEGR
LMAX	1.1%	14ms	OK

Maximise expected value inside the risk budget.

1 Score every candidate action

Expected P&L and expected risk to the book, for each possible action.

2 Discard budget breaches

Drop anything that violates the live VaR, concentration or LP-capacity limits.

3 Execute the highest-value survivor

Choose the maximum-EV action within budget — and log the rationale.

$$\max \text{EV}(\text{action}) \quad \text{s.t.} \quad \text{risk} \leq \text{budget}$$

Not A or B — a spectrum, chosen per trade.

◀ internalise · offsets book ————— externalise · compounds book ▶

Four streams resolve into one decision.

ZL-41200 · Vertex Systematic · BUY 18 lots EUR/USD · Fri 13:28:00 GMT · NFP in 2 min

✓ Internalising would compound a \$22M concentration into an event ✓ Event-driven adverse selection is at its peak ✓ XTX is the healthiest venue this second

An inline decision engine on the order path.

SECTION 02

02

The Platform

A decision core, surrounded by engines that share one context layer — so every improvement compounds.

One operating system — two cores, many engines.

One shared real-time context layer feeds them all

When confidence is low, pool the flow.

ROUTE ON EXPECTED VALUE × CONFIDENCE

A-book	Confident & adverse → externalise
B-book	Confident & benign → internalise
C-book	Uncertain → pool & hedge as a portfolio

Early on you can't separate luck from skill, or temporary from toxic. The uncertainty itself is the risk — so retain the trade risk and hedge the portfolio risk.

HEDGE THE PORTFOLIO, NOT THE TRADE

100

uncertain trades pooled

→

2

net factor hedges

We hedge only the risks that matter:

Delta directional	Event FOMC·CPI·NFP
Tail extremes	Correlation cross-asset

↓ spread cost ↓ LP fees ↓ market impact

SECTION 03 · THE NEW FRONTIER

03

The Alpha Engine

Harness every trade, every trader and the market context to place proprietary, alpha-seeking trades — from the flow you already own.

Your order flow is a representative sample of the market.

Every broker and prop firm sits on a continuous, real-time census of trading intent — across hundreds of symbols, every style and time zone. In aggregate, that is a representative sample of the market no vendor can sell you.

Score every trade — don't just follow winners.

THE NAIVE APPROACH

Copy winners, fade losers

- ✗ A label per account — survivor-biased
- ✗ Gameable once traders notice
- ✗ Laggy — reacts after the edge has decayed
- ✗ Blind to size, timing and market context

THE ALPHA ENGINE

Trade-level scoring

- ✓ Every trade scored on its expected forward contribution
- ✓ Conditioned on who, when, how big and the market state
- ✓ Skill resolved per trade — not stamped on an account
- ✓ A losing trader can still place a high-alpha trade

Scored trades become a live signal for every symbol.

SYMBOL		LIVE ALPHA SIGNAL · CONVICTION	
EUR/USD	LONG		0.72
NAS100	LONG		0.63
US 10Y	LONG		0.55
XAU/USD	SHORT		0.41
GBP/USD	SHORT		0.28

Every tradable symbol — refreshed in real time, sized to the risk budget, hedged via the Adaptive Book.

How a trade becomes alpha.

♻ Closed loop realised forward returns retrain the models — shared with the self-learning core

A second P&L line — and a flywheel that compounds.

Engine 1 defends the revenue you already make. Engine 2 creates a new, uncorrelated line from the same data — at near-zero marginal data cost.

FOR BROKERAGES
The dealing desk becomes a profit centre

FOR PROP FIRMS
Monetise the evaluation funnel itself

THE FLYWHEEL

- 1 More clients & flow
- ↓
- 2 Richer, more representative microcosm
- ↓
- 3 Sharper signals & better risk decisions
- ↓
- 4 More alpha & higher retained P&L
- ↓
- 5 Firm growth → back to 1

SECTION 04

04

Why it wins

A defensible advantage, a de-risked path to live,
and the rare person who can build it.

THE MOAT

It trains on your flow — so the advantage can't be bought.

THE INDUSTRY TODAY

- Static client classification
- Routing fixed at account level
- Blind to market & own-book state
- Reacts after the fact
- Flow seen only as risk, never as alpha

THE TRADE INTELLIGENCE ENGINE

- + Context-aware decision per trade
- + Routing, sizing & venue optimised live
- + Sees client, market, book & liquidity
- + Learns from every fill — compounding edge
- + Turns the same flow into proprietary alpha

THE MOAT | It trains on your flow — so the advantage compounds and cannot be bought off the shelf by a competitor running static models.

Shadow first, then inline — live in two quarters.

MONTH 0-2

Foundations

Instrument the data and assemble the four context streams from your flow.

MONTH 2-4

Shadow mode

The engine recommends alongside live routing — prove the uplift at zero added risk.

MONTH 4-8

Inline pilot

EV-optimised decisions go live on a pilot cohort and symbol set, under full governance.

MONTH 8-12

Operating system

Full rollout with closed-loop learning — risk engine and alpha engine, live.

How we know it’s working — from day one.

↑ Risk-adjusted P&L

vs the shadow baseline — the headline number

+ Alpha P&L

a new line — proprietary signals vs benchmark

↓ Adverse selection

mark-outs on internalised flow fall

↓ Hedging cost

stop over-externalising benign flow

ms Decision latency

single-digit milliseconds, inline

100% Explainable

every decision ships with reason codes

Built by someone who can trade, model, ship and lead.

I designed and built the complete Trade Intelligence Engine — end to end, on a foundation of institutional front-office trading and quant research.

01 · JUDGEMENT

Trading instinct

Front-office rates trading at Morgan Stanley and Bank of America — pricing, liquidity, microstructure, real risk.

02 · DEPTH

Quant & ML

Oxford mathematician. Python, systematic research and modelling — built, not just specified.

03 · DELIVERY

Ships & stays up

Production data pipelines and real-time systems across Marex, BGC Partners and beyond.

04 · LEADERSHIP

Brings it together

Led data-science and algo-trading research; aligns analytics, dealing and technology on one goal.

THE CLOSE

Run it in shadow on your flow. See the uplift before you commit.

A real-time operating system: a risk engine that decides every trade, an Adaptive Book that pools and hedges uncertainty, and an alpha engine that turns your flow into proprietary signal — proven first in shadow, at zero added risk.

SMARTER

The right decision per trade — not a blunt label per client.

DEFENSIBLE

Learns from your own flow — a moat that compounds.

DELIVERABLE

Built and proven — live on your flow in two quarters.
